

MasterControl Lead Prioritization

Turning Data into Sales Action

Team: Adam Edwards, An Lee, Brian Frerichs, Kun Joo Cho

April 5, 2026

Business Problem

Business Challenge

MasterControl sells two products with very different lead performance:

- Qx (Established Product) Converts 19.7% of leads
- Mx (Newer Product) Converts only 12.7%

Why This Matters

- Sales spends too much time on low-probability Mx leads
- High-intent Mx prospects are not consistently prioritized
- Marketing spend is spread across channels with uneven ROI

What the Model Predict

Target Variable

- Whether a lead advances to the next CRM sales stage after initial contact

Key Predictor Groups

- Company attributes: industry, firm size, geographic territory
- Contact attributes: role title, job function, seniority
- Engagement signals: acquisition channel, inbound source, pricing-page activity

Why Two Models

- Mx and Qx exhibit materially different conversion drivers, requiring distinct prioritization rules

Who to Prioritize: Mx

Criterion	Best Target	Why
Industry	Medical Device or Blood & Biologics	Convert at 15-18% vs 12.7% avg
Manufacturing Model	In-House, CMO, CDMO	Actual manufacturers convert 2x better than services
Company Size	Small or Medium	Small companies: 16.8% vs Large: 7.3%
Territory	Americas	15.0% conversion vs APAC 8.5%
Job Title	Director, Manager, VP	30% higher conversion than specialists
Job Function	Quality/QA	Convert at 17%
Best Channel	SEO or Direct/Inbound	24-30% conversion vs Online Ads 19%

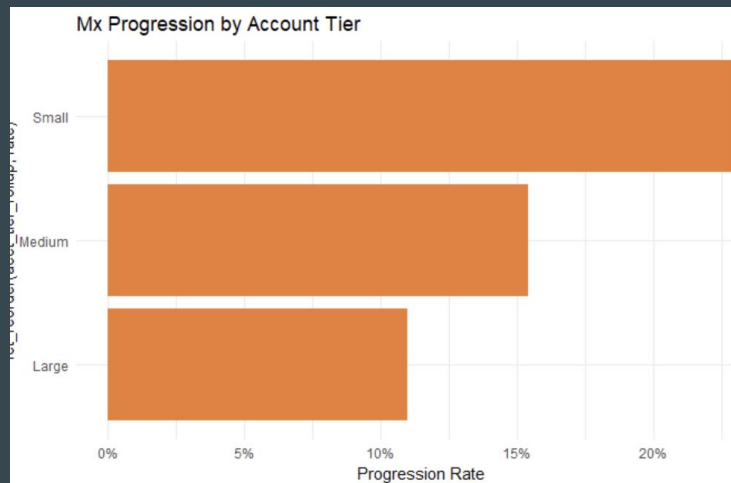

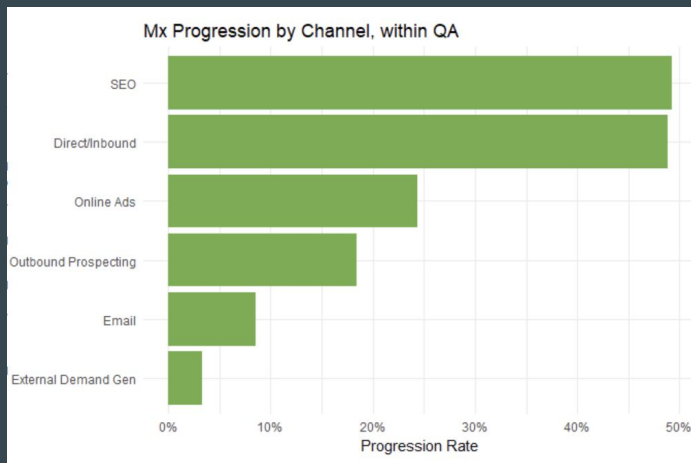

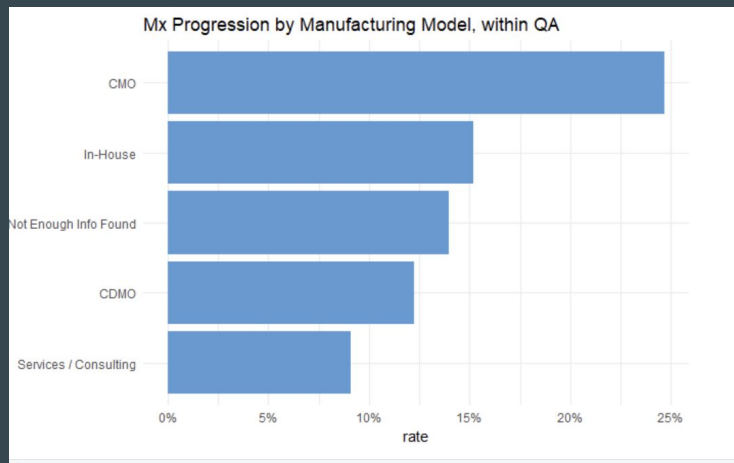

Who to Prioritize: Qx

Criterion	Best Target	Why
Industry	Pharma & BioTech or Medical Device	Both convert ~21% vs 19.7% avg
Manufacturing Model	Any (In-House, CDMO, CMO, Testing Labs)	All >20% conversion
Company Size	Any	Less sensitivity than Mx
Territory	Americas (or Japan)	Americas 21.4%; Japan small but strong
Job Title	C-Level, VP, Director	C-Level converts at 31%
Job Function	Quality, Regulatory, R&D	Regulatory titles have 2x baseline
Best Channel	SEO or Direct/Inbound	28-31% conversion

Who to Prioritize: Mx (Quality/QA)

Criterion	Best Target	Why
Industry	Blood & Biologics, Medical Device, Pharma & BioTech	All progress at roughly 23-25%
Manufacturing Model	In-House, CMO, CDMO	These all convert above the baseline, CMO is best at ~ 25%
Company Size	Small	<u>Small companies: 25%</u>
Best Channel	SEO or Direct/Inbound	<u>Both are close to 50% conversion rate</u>

- Takeaway: Continue drilling down into small companies
- Takeaway: The communication channel is extremely important

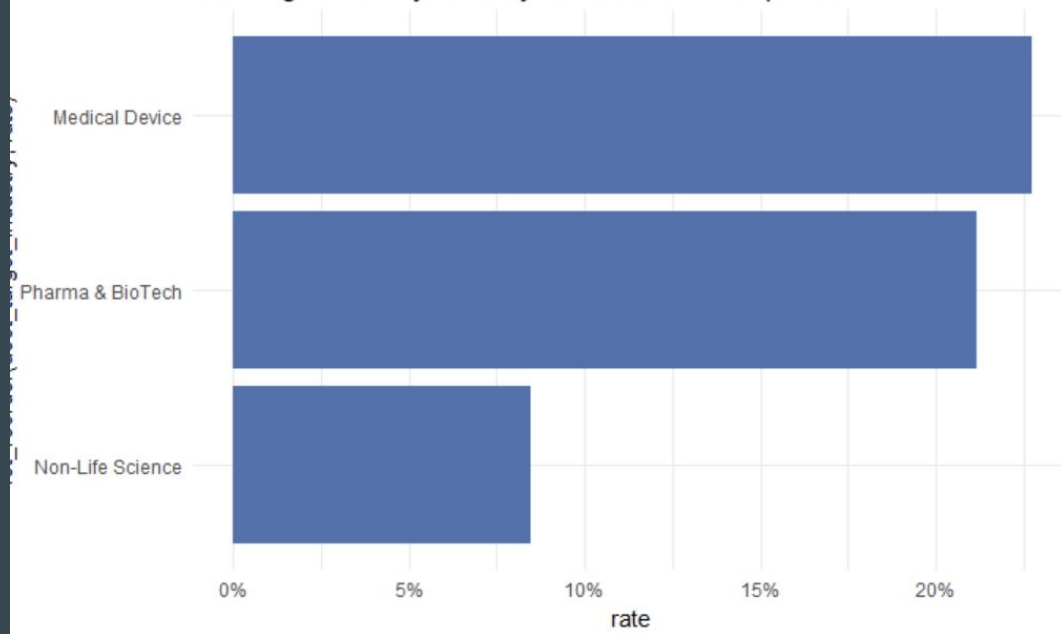

Who to Prioritize: Mx (Small Companies)

Criterion	Best Target	Why
Industry	Medical Device and Pharma	Medical Device progresses at 26% Pharma & BioTech progresses at 22%

- Takeaway: Want to investigate Small Medical Device and Pharma companies separately to understand these different cohorts

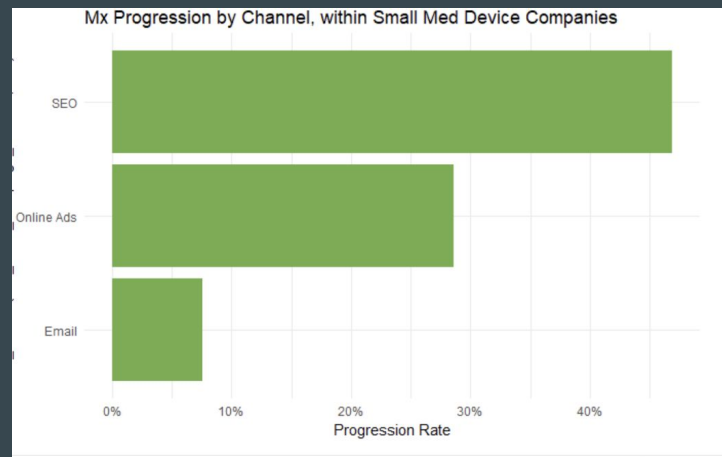

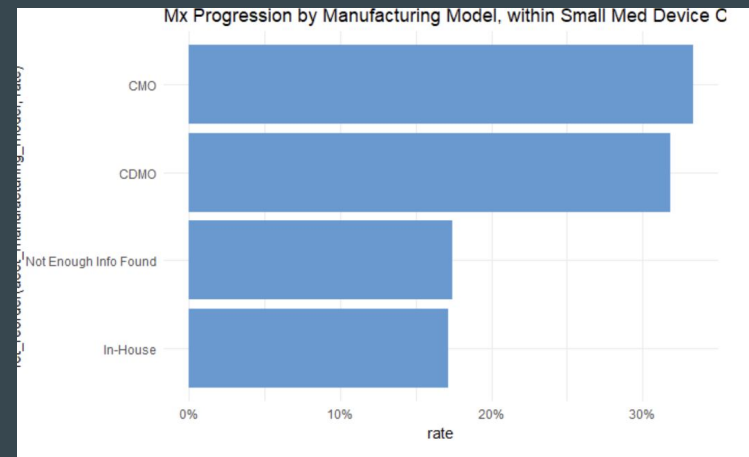

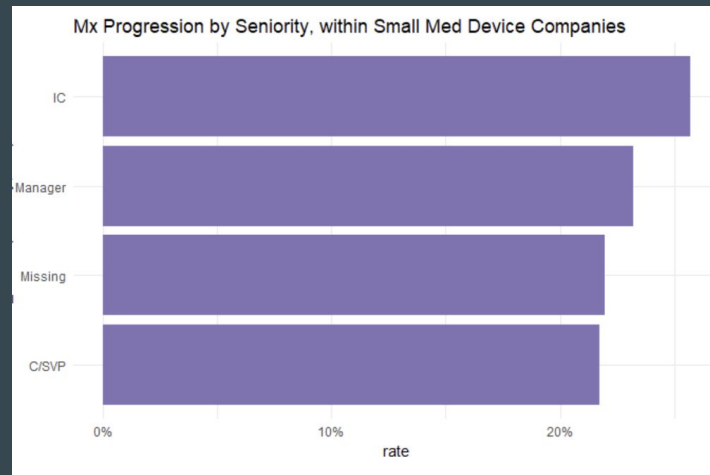

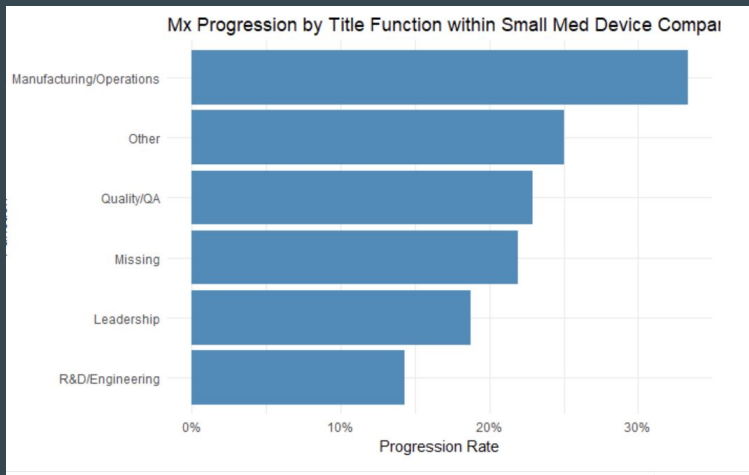

Mx Progression by Industry, within Small Companies

Who to Prioritize: Small Med Device Companies

Criterion	Best Target	Why
Job Function	Manufacturing/Operations	Progressed at 33%
Manufacturing Model	CMO, CDMO	Both progress at above a 30% rate
Seniority	Any	All seniority levels had a progression rate of ~22-26%
Best Channel	SEO	Progresses at ~47%

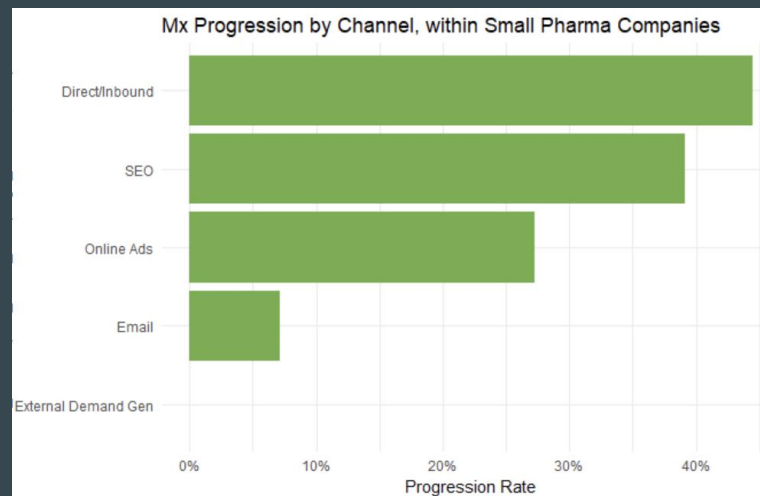

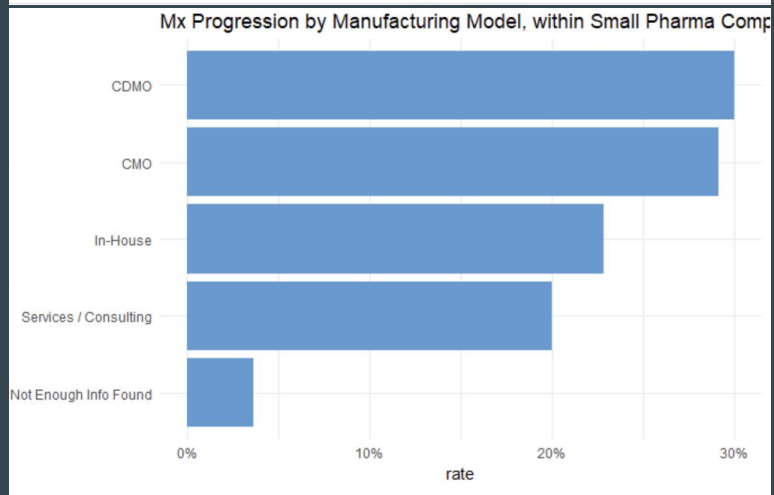

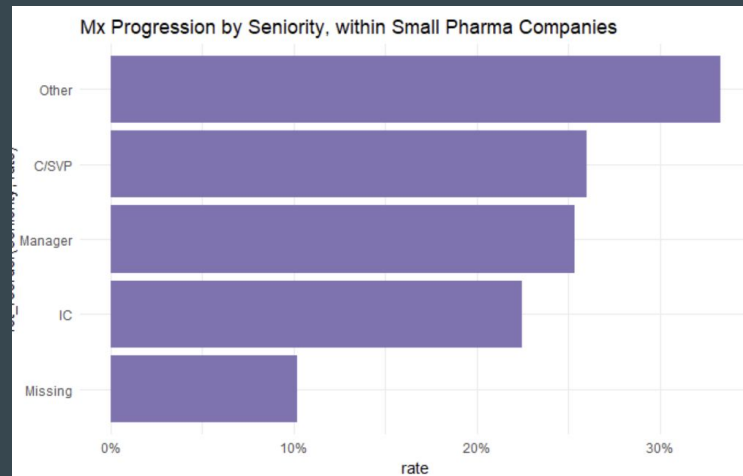

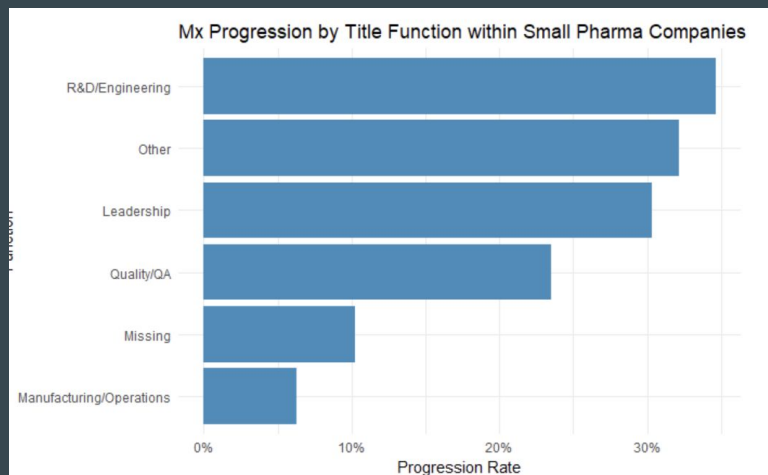

- Takeaway: Manufacturing/Operations roles are very strong
- Takeaway: QA remains strong
- Takeaway: SEO channels remain superior
- Takeaway: CMO/CDMO see the highest progression rate

Who to Prioritize: Small Pharma Companies

Criterion	Best Target	Why
Job Function	R&D/Engineering, Leadership, Quality/QA	R&D/Engineering progressed at 35%, Leadership at 30%, and Quality at 24%
Manufacturing Model	CMO, CDMO	Both progress at close to a 30%
Seniority	Any	All seniority levels had a progression rate of ~22-26%
Best Channel	Direct/Inbound	Progresses at 45%

- Takeaway: R&D/Engineering roles are very strong
- Takeaway: QA remains strong
- Takeaway: Direct/Inbound is best here, SEO channels remain strong as well
- Takeaway: CMO/CDMO see the highest progression rate

Best Communication Channels

Pricing Page Requests (Highest Intent)

- Only 1.9% of total leads
- Mx: 58% conversion (4.6x avg)
- Qx: 50% conversion (2.5x avg)
- *Immediate sales follow-up required*

Top Performing Channels

- SEO (Organic Search):
 - Mx: 24% | Qx: 30%
- Direct / Inbound Traffic:
 - Mx: 23% | Qx: 28%
- *Consistently highest quality & scalable*

Lower-Quality Channel

- Online Ads:
 - Mx underperforms (~19%)
- *High volume, lower conversion*

Channel	% of Leads	Mx Conversion	Qx Conversion
SEO	17.7%	24.3%	30.1%
Direct/Inbound	9.8%	23.5%	28.0%
Email	22.7%	18.0%	21.5%
Online Ads	27.3%	19.0%	20.5%
Referrals	0.9%	28.0%	32.0%

Our Modeling Approach

Our Modeling Approach

- Random Forest classification
- Separate models for Mx and Qx
- Trained on historical lead outcomes

Performance

- Model ranks a progressing lead above a non-progressing lead ~85.5% of the time
- Operational decision threshold set at 0.60

Business Meaning

- Sales can capture ~72% of all future progressing leads by contacting only high-scored prospects.

Expected Impact

Improve Mx Conversion Rate

- From 12.7% → ~16 -18%
- Driven by better targeting & prioritization

Increase Sales Efficiency

- Sales focuses on high-probability leads first
- Reduces time wasted on low-quality outreach

Faster Sales Cycles

- High-intent leads (pricing page, inbound) convert faster
- Shortens time from lead → opportunity

Higher ROI on Marketing Spend

- Shift budget toward SEO & inbound
- Reduce spend on lower-performing channels (ads)

Key Takeaways

- Prioritize pricing page leads immediately
 - Highest conversion (50–58%)
- For Mx: focus on the right customer profile
 - Small/medium, Medical Device/Biologics, Americas, Quality/Operations roles
- Double down on SEO and inbound channels
 - Highest quality, scalable lead sources
- Reduce reliance on low-performing channels (Online Ads for Mx)
 - Improve overall lead quality
- Operationalize lead scoring
 - Use model scores to guide daily sales outreach
